***Benefit Golf Tournament to be Held on July 5 to Support Research to
Find a Cure for Lesser-Known Disease - Mitochondrial Disease***

Mitochondrial Disease is not as widely known as other health afflictions, yet symptoms of the ravaging disease can be debilitating and, in some cases, lead to death. It is estimated that 4,000 children born each year will develop a form of Mitochondrial Disease.

To offer hope to suffering young people, a benefit golf tournament will be held on July 5, 2007 at 9 A.M. at the Tunxis Plantation Country Club in Farmington, CT. Caring people from across New England will swing clubs to raise funds to support the most promising research to find a cure for Mitochondrial Disease. Members of the press are invited to attend this event. To RSVP for the event, please call (203) 699-0022.

Mitochondrial Disease can present itself in many different ways with symptoms such as muscle weakness and pain, cardiac disease, diabetes, liver disease, respiratory difficulties, seizures, lactic acidosis, development delays, susceptibility to infection, and more. Most often, symptoms get worse with time and lead to death.

There is no cure for Mitochondrial Disease...yet. That's why there's The Foundation for a Cure for Mitochondrial Disease, Inc. (MitoCure). The organization is committed to finding hope for all who suffer.

MitoCure exists to educate communities about Mitochondrial Disease and to generate financial support to find a cure. All operating costs are covered through private contributions and all board members are volunteers. This allows 100 % of all donations to go directly to research efforts around the world.

For more information, go to www.mitocure.org or call (203) 699-0022.
